

ANKIT MANGLA

Backend Engineer · AI/LLM Systems · Cloud Infrastructure

Delhi, India | +91-8059710580 | ankitmangla.2000@gmail.com | linkedin.com/in/manglaankit

SUMMARY

Software engineer with 3+ years building scalable backend systems, event-driven microservices, and AI-powered applications. Experience taking products from architecture through production — API design, async processing pipelines, database optimization, and cloud-native deployment on AWS and Azure. Currently focused on LLM-powered features: document processing, intelligent search, and workflow automation.

SKILLS

- Languages:** JavaScript, TypeScript, Python, Java, C++
- Backend, APIs & Testing:** Node.js, Express.js, FastAPI, REST APIs, Jest, Unit & Integration Testing
- Frontend:** React.js, HTML5, CSS3, Tailwind CSS
- Architecture:** Microservices, Event-Driven Architecture, Distributed Systems, System Design
- Cloud, DevOps & Tools:** AWS (EC2, ECS, ECR, Lambda, S3), Azure (App Services, Queues, Key Vault), Docker, CI/CD (Bitbucket Pipelines), Git, Cursor, Claude Code
- Data & Messaging:** MongoDB, PostgreSQL, MySQL, DynamoDB, Elasticsearch, Redis, Kafka
- AI/LLM:** OpenAI APIs, LLM Integration, Prompt Engineering, AI Pipelines

EXPERIENCE

- Software Engineer** — BterAI · Delhi NCR (On-site) May 2024 – Present
- Architected event-driven microservices and asynchronous processing pipelines using Apache Kafka and Azure Queues
 - Built a distributed Cold Store Management System that automated ~80% of inventory, billing, and operational workflows
 - Designed and deployed Elasticsearch-based search infrastructure for fast querying and analytics across large operational datasets
 - Developed AI-powered workflow automation integrating LLM-based document processing, classification, and decision-support pipelines
 - Built and scaled cloud-native services across AWS (EC2, ECS, ECR, Lambda, S3) and Azure (App Services, Queues, Key Vault); own CI/CD, containerization, and production deployment
 - Mentor 5 engineers through code review, system design, and technical decision-making; partner with product stakeholders on architecture and delivery roadmap
- Full Stack Developer** — Mockvel · Hybrid Jul 2023 – Apr 2024
- Developed scalable REST APIs and backend services in Node.js and Express.js; designed and optimized PostgreSQL and MongoDB schemas for performance and reliability
 - Built AI-powered sales automation using OpenAI APIs and conversational workflows
 - Integrated Polygon blockchain into backend workflows for secure transaction recording and verification, optimizing gas costs
 - Contributed to full-stack feature development, debugging, and production issue resolution

SELECTED PROJECTS

- Aegis ML Platform** 2026
- Machine learning services for audio processing, transcription, and speech analysis; built scalable pipelines for ingestion, preprocessing, speaker diarization, and model inference
- AI Case Processing Platform**
- Distributed AI pipelines (Python, FastAPI, Azure Queues) for asynchronous document processing; integrated LLM-based classification, extraction, and decision-support workflows, with Azure Key Vault for security and configuration management
- Blockchain Settlement Platform** 2025 – 2026
- Backend services for blockchain transaction processing and chain synchronization; integrated Polygon for secure, auditable settlement with optimized execution cost

EDUCATION

- Bachelor of Technology, Computer Science** 2019 – 2023
- UIET, Kurukshetra University · CGPA 7.5
